Contents

1. Reading the dashboard in 5 minutes
2. Adoption tab
3. Questions to ask your teams
4. Important reminders
5. Troubleshooting

Role: `executive` · **Demo user:** `exec` · **MFA:** recommended

Your permission: `dashboards ( dashboard:read )`. You see **Home** only, with live KPIs computed directly from the platform, so no manual reporting is needed. You do not see individual customers' personal data.

Read sections 3–4 of the [Staff User Manual](#) for sign-in and navigation (about 5 minutes).

1. Reading the dashboard in 5 minutes

Open **Home**. The **as-of** date is shown at the top ("Growth across new business and retention").

#	Block	Question it answers	What good looks like (proposed)
1	Base: profiles, expiring in 30 days, lapsed/uninsured (≤ 60 days), profiles with usable data	How big is the opportunity right now?	Expiring-in-30 is the near-term pipeline. Lapsed vehicles are a new-business and road-safety opportunity.
2	Hot leads and leads by tier	How much high-intent demand do we have?	A stable or rising hot share as data quality improves
3	Journey mix: renewal (retention), conquest (other insurer), new vehicle, lapsed/uninsured, cross-sell	Are we growing new business as well as retaining?	Conquest + new vehicle + uninsured together larger than renewal is healthy growth
4	Data quality issues and profiles with usable data	Can we trust the targeting?	Usable-data share rising month on month (baseline $\approx 10\%$)
5	Engagement: messages by channel, delivery status, voice bot outcomes, handoffs	Are we reaching customers without spamming?	Low blocked and failed share. Opt-outs $\leq 5\%$ of calls.
6	Sales: orders, GWP, by journey and channel	Is it converting, and where?	In-app (VETC app / Zalo) share $\geq 50\%$ in pilot. Partner API growing after launch.
7	Active policies by product	Product mix	Add-on attach (PA_SEAT, MOTOR_PD) rising
8	Claims by status	Are we keeping the claims promise?	Few claims stuck in <code>submitted</code>
9	Channel economics: voice-bot cost vs equivalent telesales cost, messaging cost, acquisition cost per order (bot + messaging)	Is the model efficient?	Saving vs telesales positive. Cost per order falling.

Notes on economics: unit costs come from the `costs` rule set (for example voice bot 1,500 ₺/min, telesales 6,000 ₺/min, Zalo ZNS 300 ₺, SMS 700 ₺ per message). These are **assumptions** until replaced with contracted rates.

2. Adoption tab

Shows how the organisation uses the platform: active users, sign-ins, failed sign-ins, handoff actions, and actions by type. Built-in targets: weekly active telesales $\geq 90\%$, average clicks to renew ≤ 3 , handoff first contact within 2 business hours, rule change lead time ≤ 1 day.

3. Questions to ask your teams

If you see...	Ask...
Many hot leads but few orders	"Are handoffs worked within 2 hours? Are links sent?" (Telesales supervisor)
High blocked messages	"Which contact-policy reason is blocking? Are journeys overlapping?" (Campaign manager)
High voice opt-out or plate-mismatch rates	"Are we calling the right people? What does the data steward see?"
Usable-data share flat	"Is the confirm-expiry step working in the app?" (Product, Data)
Cost per order rising	"Is the channel mix shifting to telesales? Are bot calls converting?"
Partner orders flat after launch	"Which partners are certified? Any channel-conflict issues?" (Partner manager)

4. Important reminders

- **TNDS premiums are regulated and identical everywhere.** Growth comes from service value, not price. Any request for discounting must be refused (Law on Insurance Business 08/2022/QH15).
- KPI targets in the delivery documents are **proposals** to be agreed by the Steering Committee.
- Dashboards are live. Numbers can change during the day as journeys and sales run.

5. Troubleshooting

Problem	Fix
Dashboard empty in the sandbox	The sandbox is seeded nightly. Ask support if it stays empty.
A number looks wrong	Note the as-of date and the block, and ask the Product Owner. Each number is traceable to platform data.
Want customer-level detail	Ask the campaign manager or supervisor (role-based access protects personal data).
