5. Metrics and targets (proposed)
6. Iteration loop
7. Schedule
8. Roles in a session

Purpose: prove, with real users, that the v1 UI meets its usability goals before the pilot, and keep improving it during the pilot. The goals are renewal in ≤ 3 taps, agents moving from claim to outcome in ≤ 6 clicks, rule changes without IT help, and a trustworthy experience for customers who are wary of insurance calls.

Item	Value
Owner	iorta TechNXT UX Lead
Co-owners	TASCO Product Owner, VETC Product (customer app), VETC call-centre manager (agents)
Rounds	R0 prototype (Discovery wk 2) · R1 MVP (Sprint 3) · R2 release candidate (UAT wk T2) · R3 pilot in-field (pilot wk 2–3)
Locations	Hà Nội and TP. Hồ Chí Minh (VETC/TASCO offices, call-centre floors, and customer intercepts at VETC service points and inspection centres), plus remote sessions
Environment	SANDBOX with <code>DEMO_MODE=true</code> , synthetic data and seeded demo users; customer app via demo picker or signed links on test phones

1. Research questions

1. Can customers renew from a reminder in ≤ 3 taps without help, and do they trust it?
2. Do customers understand the cover status card (expiry, "estimated" vs "verified") and are they willing to confirm or correct their expiry?
3. Do customers understand benefits without any discount framing, and do the benefits influence their choice?
4. Can telesales agents claim, call, quote and record outcomes quickly? Do they use the talking points?
5. Do agents and supervisors understand the explainable score and the next best action, and do they trust them?
6. Can rule authors draft, validate and simulate a change, and can approvers review it confidently?
7. Can compliance find audit evidence and execute a DSAR without guidance?
8. Are the staff console and customer app accessible to users with low vision or who rely on a keyboard or screen reader?

2. Methods

Method	Rounds	Participants	What we learn
Moderated task-based tests (think-aloud, 45–60 min)	R0–R2	Customers, agents, supervisors, campaign, authors/approvers, compliance, stewards	Task success, errors, time on task, comprehension, trust
System Usability Scale (SUS)	R1–R3	All moderated participants + pilot users	Comparable usability score per role
Single Ease Question (SEQ) after each task (1–7)	R1–R2	All moderated participants	Perceived difficulty per task
First-click testing (remote, unmoderated)	R0–R1	40+ customers, 20+ staff	Navigation and label clarity
Tree testing of the staff console IA	R0	20 staff across roles	Findability of pages (labels VI/EN)

Method	Rounds	Participants	What we learn
Field observation / contextual inquiry	R0, R3	6–8 agents per city	Real call-floor conditions, headsets, multitasking
Accessibility usability sessions	R2	3–5 users: low vision, screen-reader user, older drivers (60+)	Real-world accessibility beyond automated checks
Analytics + in-app feedback	R3	All pilot users	Taps-to-renew, drop-off per step, help-drawer usage
A/B test (pilot)	R3	Pilot cohort	Variant performance of cover card and benefit framing (copy-guard compliant)

3. Recruitment

Segment	# per city (HN / HCM)	Criteria	Recruitment channel	Incentive
Customers — VETC app users with car TNDs due in ≤ 90 days	6 / 6	Mix of ages (25–40, 40–55, 55+), genders, TASCO and non-TASCO insured, Android and iOS	VETC in-app invitation (with consent), service-point intercepts	VETC service voucher (non-cash, not tied to premium; approved by Compliance)
Customers — lapsed or unknown expiry	3 / 3	Expiry unknown or lapsed ≤ 60 days	VETC data (consented research panel)	Same
Customers — fleet / company vehicles (secondary)	1 / 1	Company-owned	B2B team	Same
Telesales agents	5 / 5	Mix of tenure (< 6 months, > 2 years)	Call-centre manager	Time in lieu
Telesales supervisors	1 / 1		Call-centre manager	—
Campaign managers	2 (either city)		TASCO/VETC marketing	—
Rule authors / approvers / compliance	2 / 2 / 2		TASCO product and compliance	—
Data stewards	2		Data team	—
Claims handlers	2		TASCO claims	—
Accessibility participants	3–5	Low vision, screen-reader user, 60+	Disability organisations, VETC customer panel	Honorarium

Five to six participants per segment per round find most usability problems. Quantitative benchmarks (SUS, time on task) are aggregated across rounds R2 and R3.

Ethics and privacy: informed consent (Vietnamese) covering recording and data use. Sessions use **synthetic data only**. Real customer data is never shown in tests. Recordings are stored for 90 days and then deleted. Participants may stop at any time.

4. Test scripts

4.1 Session structure (moderated, 60 min)

1. Welcome and consent (5 min). "We are testing the product, not you."
2. Background questions (5 min): current renewal habits, VETC app use, attitudes to insurance calls (customers); current tools and pain points (staff).
3. Tasks (35–40 min), think-aloud, with SEQ after each task.
4. SUS questionnaire (Vietnamese version) (3 min).
5. Debrief (7 min): trust, what was confusing, what they'd tell a friend or colleague.

4.2 Customer tasks (customer app, test phone)

#	Scenario (read aloud in Vietnamese)	Success criteria	Target
C1	"Bạn vừa nhận tin nhắn từ VETC rằng bảo hiểm TNDS xe của bạn sắp hết hạn. Hãy gia hạn bảo hiểm." (You received a VETC message that your TNDS is expiring. Please renew.)	Reaches e-certificate	≥ 90 % success, ≤ 3 taps, ≤ 60 s
C2	"Ứng dụng hỏi ngày hết hạn bảo hiểm hiện tại. Ngày đúng là 20/11/2026. Hãy cập nhật."	Correct date submitted	≥ 90 %, ≤ 45 s
C3	"Bạn muốn thêm bảo hiểm cho người ngồi trên xe. Hãy xem phí và thêm vào."	Add-on included in the order	≥ 80 %
C4	"Cảnh sát giao thông muốn kiểm tra bảo hiểm của bạn. Hãy cho họ xem."	Shows the e-certificate QR; the verification page shows "valid"	≥ 90 %
C5	"Bạn không muốn nhận cuộc gọi tư vấn nữa. Hãy thay đổi."	Call consent off and saved	≥ 90 %
C6	"Bạn vừa bị va chạm nhẹ. Hãy báo tai nạn."	FNOL submitted, and the participant understands the 4-hour callback	≥ 85 %
C7	"Bạn muốn tải dữ liệu cá nhân của mình."	Data export downloaded	≥ 80 %
C8 (comprehension)	"Theo bạn, mua qua VETC có rẻ hơn không? Bạn được gì?" (Is it cheaper via VETC? What do you get?)	States that the price is the same and names ≥ 1 benefit	≥ 80 %
C9 (trust, voice)	Listen to a recorded voice bot call (synthetic). "Bạn có tin cuộc gọi này không? Vì sao?"	Mentions the disclosure, no-OTP promise or plate check	Qualitative

4.3 Telesales agent tasks (staff console, desktop + headset)

#	Scenario	Success	Target
A 1	Sign in as agent . hn and find the most urgent customer who wants a call back	Claims the right handoff (hot, oldest)	≥ 90 %, ≤ 30 s
A 2	Prepare for the call: what should you mention, and what concerns did the customer raise?	Names ≥ 2 talking points and the trust or price flag	≥ 90 %
A 3	The customer wants TNDS plus accident cover for 7 seats. Quote it.	Correct quote with PA_SEAT	≥ 85 %, ≤ 90 s

#	Scenario	Success	Target
A 4	The customer prefers to pay in their app. Complete the sale.	Sends the one-tap link, not issuing over the phone	≥ 90 %
A 5	The customer asks "Can you give me a discount?" How does the screen help you answer?	Uses the regulated-price explanation and value benefits	≥ 90 %
A 6	Record that the customer will decide tomorrow	Status <code>callback</code> with note	≥ 95 %
A 7	Explain why this customer has a score of 82	Reads the factor reasons correctly	≥ 80 %

4.4 Supervisor, campaign, rules, compliance, data, claims tasks (abridged)

Role	Tasks
Supervisor	Reassign a handoff from an absent agent. Find how many handoffs are older than one day.
Campaign manager	Find hot leads expiring within 14 days in TP.HCM. Run due touchpoints and explain why 3 were skipped. Simulate a wallet top-up event for a customer.
Rule author	Raise the hot threshold from 70 to 75, validate, simulate on a given customer, and submit. Try to add "giảm giá" to a template and explain the rejection.
Rule approver	Review and approve the author's change. Try to approve your own draft (expect it to be refused).
Compliance	Find who approved the last scoring change. Verify the audit chain. Export a customer's data for a DSAR. Attempt erasure on a customer with an active policy and explain the outcome.
Data steward	Resolve a <code>plate_mismatch</code> issue. Correct an expiry with evidence.
Claims handler	Acknowledge the claim closest to breaching its SLA. Move a claim to assessor assigned.

5. Metrics and targets (proposed)

Metric	Customer app	Staff console (agents)	Staff console (other roles)
Task success (unassisted)	≥ 90 % core tasks (C1, C2, C4, C5)	≥ 90 % core tasks (A1, A3, A4, A6)	≥ 85 %
Time on task	Renew (C1) median ≤ 60 s	Claim → outcome ≤ 4 min excluding call time	Rule change draft → submit ≤ 10 min
Taps / clicks	Renew ≤ 3	Claim → outcome ≤ 6	—
Error rate	≤ 1 non-critical error per task. 0 critical errors (wrong purchase, wrong customer).	Same	Same
SEQ (1–7)	≥ 5.5 average	≥ 5.5	≥ 5.0
SUS	≥ 75 (R2), ≥ 80 (R3)	≥ 70 (R2), ≥ 75 (R3)	≥ 70
Comprehension: "same price everywhere"	≥ 80 %	≥ 95 % (agents)	—

Metric	Customer app	Staff console (agents)	Staff console (other roles)
Trust rating ("I trust this is really VETC/TASCO", 1–5)	≥ 4.2	—	—
Accessibility participants core task success	≥ 80 %	≥ 80 %	—

Severity scale for findings:

Severity	Definition	Action
S1 Critical	Prevents task completion or causes a wrong financial or privacy outcome	Fix before the next release. Blocks G3.
S2 Major	Significant delay or frustration; most users recover	Fix within the current or next sprint
S3 Minor	Small irritation or cosmetic issue	Backlog, prioritised by frequency
S4 Suggestion	Enhancement idea	Product backlog

6. Iteration loop

1. **Synthesis within 48 hours:** notes tagged by task and severity, with highlight clips (synthetic data only).
2. **Findings report** with problem, evidence (quotes, metrics), severity, recommendation and owner, shared in the sprint review.
3. **Decisions** in the weekly design review. S1/S2 items go into the next sprint. Content changes that are rule content (templates, voice lines, benefit wording) go through the Rules studio with Compliance approval.
4. **Re-test** of every S1/S2 fix in the next round.
5. **Track** the metrics trend per round in the SteerCo pack.

7. Schedule

Round	When	Sessions	Deliverable
R0	Discovery wk 2	8 customers, 6 agents (clickable prototype), tree test 20 staff	Prototype findings, IA decisions (G1 input)
R1	Sprint 3 (end)	12 customers, 8 agents, 6 other roles	MVP findings, first SUS
R2	UAT wk T2	18 customers incl. accessibility, 10 agents, 10 other roles	Benchmark report (G3 input)
R3	Pilot wk 2–3	Field observation + analytics + A/B + SUS survey of all pilot users	Pilot UX report (G4 input)

8. Roles in a session

Role	Responsibility
Moderator (UX researcher, Vietnamese native speaker)	Runs the session, stays neutral
Note-taker (BA)	Records observations, timings and errors in the template
Observer (PO, engineers, VETC/TASCO stakeholders)	Watches remotely or in an observation room, does not interrupt, writes sticky notes
Technical support	Resets the sandbox, test phones and demo users between sessions
