

Campaign Manager Manual

TASCO Insurance × VETC Growth Platform — User Manuals

iorta TechNXT

Version 1.0 · 07 October 2026

Contents

1. Your job with the platform
2. Monitor: Home dashboard
3. Work with leads
4. Run journeys
5. Requesting changes to journeys, templates or scoring
6. Troubleshooting

Document	Version	Date	Owner	Status
Campaign Manager Manual	1.0	07 October 2026	iorta TechNXT — Business Analysis and UX	Issued for submission

Role: `campaign_manager` · **Demo user:** `campaign` · **MFA:** not required by default

Your permissions: dashboards (`dashboard:read`), leads (`leads:read` , `leads:recompute`), run journeys, events and voice campaigns (`journeys:run`), view customers with personal data masked (`profile:read`), voice bot console (`voice:operate`), read rules (`rules:read`), read the telesales inbox (`handoff:read`).

You **cannot** author or approve rules. Ask a rule author to change journeys, templates or scoring (see the [Rule Author and Approver Manual](#)). You also cannot see customer phone numbers or names unmasked.

1. Your job with the platform

You run growth across **new business** and **retention**:

Journey	Objective	Who is in it (first match wins, by priority)
Uninsured vehicle recovery (<code>lapsed_uninsured</code>)	New business	Cover lapsed 1–60 days ago, expiry confidence ≥ 0.5
New vehicle onboarding (<code>new_vehicle</code>)	New business	ETC tag activated ≤ 60 days ago, not insured with TASCO
TASCO renewal (<code>renewal</code>)	Retention	Current insurer is TASCO
Conquest (<code>conquest</code>)	New business	Insured elsewhere or insurer unknown
Cross-sell (after purchase)	Cross-sell	TNDS-only buyers with marketing consent

Each journey has timed steps across **app push**, **Zalo ZNS**, **SMS**, **AI voice bot** and **telesales**. Every send passes the **contact policy** (consent, 08:00–20:00, max 1 marketing contact per day, 3 per week, 2 call attempts per week) and the **copy guard** (no discount wording, including spacing and punctuation tricks such as "giảm giá" or "cash back"). The journey stops as soon as the vehicle is insured with TASCO. Company-owned vehicles are excluded from consumer journeys and routed to the fleet / B2B team.

2. Monitor: Home dashboard

Open **Home**. Key blocks:

Block	Use it to...
Key indicators: vehicles in the golden record (with usable data), expiring in 30 days, uninsured (lapsed ≤ 60 days), new-business leads, policies sold and GWP, hot leads, open data issues, voice bot saving	Size the opportunity and the data gap
Journey mix and Next best actions	See the mix of new business vs retention, and how many leads need data repair (<code>verify_expiry</code>)
Data quality issues	Spot data problems that hurt targeting
Messages sent by channel and Voice bot outcomes	Check delivery and call results

Block	Use it to...
Sales by journey	Conversion by journey
Channel economics: voice bot cost vs equivalent telesales cost, messaging cost, acquisition cost per order, active policies by product	Business case. Unit costs come from the costs rule set.

The **as-of** date is shown at the top ("Snapshot as of ..."). **Work hot leads** opens Leads filtered to hot.

3. Work with leads

3.1 Find a target segment

1. Open **Leads**.
2. Set the filters: **Tier** (Hot / Warm / Nurture), **Journey**, **Next best action** and **Sort** (Highest score or Soonest expiry).
3. Select **Apply**.

What you will see: plate, score, tier badge, journey, days to expiry, next best action, top reason, premium and region. Select a row to open Customer 360 (personal data masked for your role).

3.2 Recompute leads

After a rule change is approved or a large data load, ask for a lead recompute (`POST /api/leads/recompute` , permission `Leads:recompute` ; the nightly `recompute` job does the same). It re-scores all leads with the active rules. Large bases take several minutes, so run it outside peak hours. Leads are also recomputed automatically for affected customers after data changes, purchases, opt-outs and expiry confirmations.

4. Run journeys

4.1 See what is scheduled

1. Open **Journeys**.
2. **Journey definitions (active rule set)** lists each journey with its priority, objective, anchor and steps.
3. **Next scheduled touchpoints** lists the next 50 scheduled steps with due date, customer, journey, step, channels and status. Select a row to open the customer.

4.2 Run due touchpoints

In production this runs automatically each morning (scheduled job). To run it manually, for example after an outage:

1. In **Run due touchpoints**, select **Run now**.
2. In demo environments only, you can also set the **Business date** and **Local send time** to rehearse a run. In production the platform always uses the real date and clock, so the contact window cannot be bypassed.

What you will see: "Due ...: done ..., skipped ..., cancelled ..." and the count by channel. The run processes **all** due touchpoints, page by page.

Status	Meaning
done	Sent (or call placed, or telesales task created) on the first permitted channel
deferred	Blocked only by the 08:00–20:00 contact window. It stays scheduled and goes out in the next run inside the window.
skipped	No channel was allowed for another reason, listed per channel (for example "weekly contact cap reached", "no marketing consent", "copy guard: ...")
cancelled	No longer relevant: already insured with TASCO, journey changed, or profile removed

Tip: if many touchpoints are deferred, the run happened outside 08:00–20:00. They are not lost: the next run inside the window sends them.

4.3 Ecosystem events (moments of truth)

VETC events trigger immediate, relevant messages. In production they arrive automatically. To test or replay one:

1. In **Journeys**, use **Simulate ecosystem event**, or in Customer 360 select **Simulate wallet top-up event**.
2. Choose the **Event** and enter the **Customer (plate key)**, for example `30A12345`, then select **Send event**:

Event	Trigger	Action
<code>vetc.tag_activated</code>	New ETC tag (likely new car)	Re-evaluate into the new vehicle journey
<code>vetc.inspection_booked</code>	Inspection booked and expiry < 60 days	Service message <code>inspection_tnds_check</code> (app/Zalo)
<code>vetc.wallet_topped_up</code>	Expiry within ±30 days	Push <code>first_reminder</code> : the customer is in the app with funds
<code>vetc.long_trip_started</code>	Vehicle uninsured (lapsed ≤ 60 days)	Push <code>value_reminder</code>

What you will see: each matching trigger and its result (for example `sent`, "condition not met" or "no permitted channel"), or "No trigger matched / customer not found".

4.4 Voice bot campaign

1. Open **Voice bot**. The **Run automated campaign** card is shown to users who can run journeys.
2. Enter the **Number of calls** (1–200).
3. Select **Start campaign**.

The platform calls the top **hot** leads that have **call consent**, are **not** on do-not-contact, have a phone number and are **not company-owned**. Each call also passes the contact policy: the 08:00–20:00 window and the weekly call-attempt cap. Calls that are not allowed are skipped with a reason.

What you will see: number called, skipped calls with reasons, and outcomes (`hot_handoff`, `link_sent`, `callback_later`, `already_renewed`, `opted_out`, `wrong_person`, `plate_mismatch`, `unverified`, `not_interested`). Hot handoffs go to the telesales inbox. Requested links are sent automatically. Opt-outs are recorded at once. Wrong-person and plate-mismatch outcomes create data-quality issues.

Watch the **opt-out rate** (proposed target ≤ 5 %) and the **plate-verification failure rate** (≤ 15 %) on the governance figures (Audit page). High rates mean you are calling the wrong people or the data is poor.

5. Requesting changes to journeys, templates or scoring

You can read every rule set in the **Rules studio** but not change it. To request a change:

1. Describe the change and the business reason (for example "move the first reminder from D-30 to D-35 for conquest").
2. A **rule author** drafts it, validates it and simulates it on sample customers.
3. A **rule approver or compliance officer** approves it. Changes to `contact_policy`, `copy_guard` and other restricted kinds need a **compliance officer**. New Zalo templates also need **Zalo ZNS approval** before use.
4. After activation, monitor the effect for 7 days.

Copy rules: never use **giảm giá, chiết khấu, hoàn tiền, khuyến mãi phí, rẻ hơn, discount, cashback, rebate, % off, cheaper, lower premium, price cut**. The platform rejects them, including variants with extra spaces or punctuation. Lead with service value. Placeholders available in templates: `{{plate}}`, `{{expiry}}`, `{{days}}`, `{{premium}}`, `{{link}}`, `{{benefit}}`.

6. Troubleshooting

Problem	Cause	Fix
Most touchpoints skipped "weekly contact cap reached"	Overlapping journeys or triggers	Review the schedule. Ask the author to space steps.
Messages "blocked" with "copy guard: ..."	A template contains a banned phrase	Request a template fix (Rules studio)
Messages "failed"	Provider outage (Zalo/SMS)	Check with support (Operations → integrations). Re-run later.
Voice campaign "called 0"	No eligible hot leads with call consent, or all calls skipped (outside 08:00–20:00 or call cap reached)	Check the skipped reasons. Run inside the contact window.
Customer details masked	Your role does not include personal data	Expected
"Active rule set ... not found"	A required rule kind is missing in this environment	Contact support
