Version 1.0 · 07 October 2026

Contents

1. Partner types
2. Onboard a partner
3. Issue an API key
4. Revoke a key
5. Suspend or reactivate a partner
6. Commission statements
7. Monitoring partner performance
8. Rules of engagement (channel conflict)
9. Troubleshooting

Document	Version	Date	Owner	Status
Partner Manager Manual	1.0	07 October 2026	iorta TechNXT — Business Analysis and UX	Issued for submission

Role: `partner_manager` · **Demo user:** `partners` · **MFA:** not required by default (recommended)

Your permissions: manage partners (`partners:manage`), read dashboards (`dashboard:read`), read policies (`policy:read`).

Partners already close most TNDS deals. Instead of competing with them, the platform gives them an **API** to quote and sell TASCO cover using VETC data, with **transparent, capped commission**. You onboard partners, control their API access and produce commission statements.

Partner sales are partner-collected. The partner takes the premium from its customer. The platform does not debit any VETC wallet for partner orders: the order's payment reference starts with `PARTNER-`, and the partner remits the premium to TASCO under the partner agreement, reconciled against the commission statement.

Read the [Staff User Manual](#) first. Give partner developers the [Partner API Guide](#).

1. Partner types

Type	Examples	Typical products
bank	Car-loan banks	TNDS, physical damage, PA
showroom	Car dealers	New-vehicle TNDS + physical damage (higher physical damage commission: 10 %)
agent	Independent agencies	TNDS, PA
fleet	Fleet operators, logistics	TNDS for many vehicles
inspection_center	Đăng kiểm centres	TNDS at inspection time

Commission (from the active `commission` rule set, as a share of **net** premium, capped by statutory limits):

Product	Rate	Statutory cap
TNDS (car, motorbike)	5 %	5 %
Physical damage (MOTOR_PD), showroom	10 %	10 %
Physical damage, other partners	8 %	10 %
Personal accident (PA_SEAT)	15 %	20 %

Rates are configuration. TASCO Finance and Legal must confirm the figures, and changes go through the Rules studio with maker-checker approval.

2. Onboard a partner

Before you start: signed partner agreement, KYC/due diligence completed, the partner's technical contact identified, and the commercial terms matching the active commission rules.

1. Open **Partners**.

2. In the **Onboard partner** card, enter **Name** and **Type** (Bank, Car showroom, Agent, Fleet, Inspection centre).
3. Select **Create**.

What you will see: "Partner created" with an ID such as `P-1A2B3C4D`, status **active**. The action is audited (`partner.created`).

3. Issue an API key

1. In the partner list, select **Issue API key** on the partner's row.
2. **What you will see:** a warning "**Copy this API key now — it will not be shown again**" with a key starting `tpk_`.
3. Copy it and send it to the partner's named technical contact through a **secure channel** (for example an encrypted file plus a password by SMS). Never send it by plain email or chat.

The platform stores only a hash of the key, so a lost key cannot be recovered. Issue a new one and revoke the old one. Each key has a short visible **prefix** and an ID (`K-...`) to identify it.

Each key carries **scopes**, which the platform enforces: `quote` (create quotes), `purchase` (bind orders) and `policies:read` (list policies and the statement). Keys issued from the console have all three. A call outside the key's scopes fails with `403` ("API key lacks scope ...").

Issue **separate keys** for the partner's test and production systems, and rotate keys at least yearly.

4. Revoke a key

Revoke when a key may be exposed, when the partner rotates keys, or when staff leave the partner.

1. Identify the key by its ID (`K-...`) and prefix.
2. Revoke it through the API: `DELETE /api/partners/keys/<key ID>` (permission `partners:manage`). The v1 console does not yet have a **Revoke** button.

What you will see: the key status changes to **revoked**. Calls with it fail at once with `401 UNAUTHENTICATED` ("Valid X-Api-Key required").

5. Suspend or reactivate a partner

1. In the partner list, select **Suspend** (or **Activate**) on the partner's row.
2. While suspended, **all** the partner's keys stop working. Existing policies remain valid.

Use suspension for contract breaches, compliance investigations or unpaid balances.

6. Commission statements

1. In the partner list, select **Statement** on the partner's row.
2. **What you will see:** the number of completed orders, the **total commission**, and lines per order and product: order, date, product, rate and amount. To limit the statement to a period, use the API with `from` and `to` dates (`GET /api/partners/<partner ID>/statement`).
3. Export the statement for Finance. Partners can download the same statement through the API, so both sides see identical figures.

Only **completed** orders (issued) earn commission. Failed orders do not.

7. Monitoring partner performance

- The partner's **Statement** shows its completed orders. Platform-wide sales are on **Home (Policies sold, Sales by journey)**.
- Check policies sold by a partner through the partner's statement or the policies list.
- Watch for unusual patterns, such as spikes in quotes without orders, many new unknown plates, or repeated failures. Discuss them with Compliance.

8. Rules of engagement (channel conflict)

Agree these with each partner and with marketing:

- Vehicles **quoted through a partner** are attributed to that partner. Discuss suppression windows for VETC conquest journeys with the campaign manager. This is configured in the `nba` / `journeys` rules through maker-checker.
- Partners must not use discount wording for TNDs either.
- **Physical damage (`MOTOR_PD`)** needs a recorded vehicle inspection before the order can be bound. Agree with the partner how the inspection is arranged; TASCO staff record it on the quote.
- Partners send personal data only with a lawful basis. Marketing consent for TASCO/VETC is not collected through the v1 partner API.

9. Troubleshooting

Problem	Fix
Partner reports 401 Valid X-API-Key required	Key revoked, wrong key, partner suspended, or the header is missing. Check the status and issue a new key if needed.
Partner reports 403 API key lacks scope ...	The key does not carry the scope for that call. Issue a key with the required scopes.
Partner reports 409 on an order	The Idempotency-Key belongs to an earlier attempt that failed, or the quote is already being paid. Retry with a new Idempotency-Key.
Partner reports 422 mentioning inspection	Physical damage quote without a recorded inspection. Arrange the inspection and have it recorded on the quote.
Partner reports 404 Quote not found on order	The quote belongs to another partner, or the ID is wrong
Partner reports 422 Quote expired – please re-quote	Quotes last 24 hours
Statement total looks wrong	Check the period. Only completed orders count. Check the active <code>commission</code> version in the Rules studio.
