7. Troubleshooting

Document	Version	Date	Owner	Status
Telesales Agent Manual	1.0	07 October 2026	iorta TechNXT — Business Analysis and UX	Issued for submission

Role: `telesales_agent` · **Demo users:** `agent.hn` (Hà Nội), `agent.hcm` (TP.HCM) · **MFA:** not required by default

Your permissions: read and work handoffs (`handoff:read` , `handoff:work`), view customers including personal data (`profile:read` , `profile:read_pii`), quote and send quotes to the customer (`quote:create`), view policies (`policy:read`), use the voice bot console (`voice:operate`), read leads (`leads:read`).

Your data scope: customers and handoffs in **your region**. You see handoffs that are unassigned or assigned to you. Other agents' claimed handoffs are hidden.

You never take payment. You prepare a quote and send it to the customer's VETC app. The customer confirms and pays there.

Read the [Staff User Manual](#) first for sign-in, navigation and help.

1. Your job with the platform

The AI voice assistant does the first contact. It discloses that it is automated, **verifies the licence plate first**, confirms the expiry date and answers basic questions. When a customer wants a person, or a hot lead reaches the telesales step in a journey, the platform puts a **handoff** in your **Telesales inbox**.

Your job: **claim** → **prepare** → **call** → **quote** → **send the quote to the customer's VETC app** → **record the outcome**.

Three promises we always keep

1. We call from the **official VETC hotline** and refer to the assistant's call.
2. We **never ask for OTP codes, card details or payment over the phone**. Payment happens only in the official VETC app.
3. We **never offer discounts**. TNDs price is set by regulation and is the same everywhere. We sell service value.

2. Your landing page: Telesales inbox

What you will see: a list of handoffs for your region. Each row shows **Plate**, **Score**, **Days** (days to expiry; negative means lapsed), **Reason**, **Status** and **Created**. Select a row to open the **handoff detail** next to the list:

Field	Meaning
Plate and status badge	The vehicle and the handoff status
Customer, Phone	Name and masked phone ("dial from the official hotline"). Full details are in Customer 360.
Plate verified	"Yes — by customer on the bot call" when the customer said the plate and it matched our record
Expiry	Current cover end date and days left
Premium	TNDs premium including VAT

Field	Meaning
Journey / reason	The journey (renewal, conquest, lapsed recovery or new vehicle) and why it was handed over, for example <code>hot_handoff</code> (customer asked for an advisor) or <code>journey_escalation</code> (no response to digital reminders)
Talking points	Generated for this customer, including trust and price flags
Notes	Earlier notes with time and author

Use the **Status** filter (Open, Claimed, Callback, Won, Lost) and **Only mine**, then select **Apply**.

3. Working a handoff step by step

Step 1 — Claim

1. In the **Telesales inbox**, select the most urgent handoff. Hot leads with few days left come first.
2. In the handoff detail, select **Claim**.

What you will see: the toast "Handoff claimed". The status changes to **claimed** and the handoff is assigned to you. Other agents no longer see it.

Tip: claim only what you can call within the next hour. The target is first contact within **2 business hours** of the handoff.

Step 2 — Prepare (about 30 seconds)

1. Open the handoff and read the **Talking points**. They are generated for this customer, for example:
 - "Call from the official VETC hotline and reference the assistant call."
 - "Customer raised a trust concern: complete everything inside the VETC app; never take payment by phone."
 - "Customer asked about price: TNDS premium is regulated and identical everywhere — lead with service value."
 - "Benefit: 24/7 roadside assistance — drives 2,400 km on highways per quarter."
 - "Close by sending the quote to the customer's VETC app / Zalo OA while on the call."
2. Select **Quote & issue** → to go to **Customer 360** and check:
 - **Policy expiry** and its confidence. If it shows *estimated* or low confidence, confirm the date with the customer first.
 - **Why this customer** (score breakdown).
 - **Value to offer (no discounts):** the benefits relevant to this customer. Do **not** offer anything marked *pending legal review* (for example loyalty points).
 - **Messages:** what we already sent and the calls made.
 - **Consent:** if the customer has opted out, a red banner at the top of the page shows **Customer opted out — do not contact**. Stop. Consent details are in the **Data & lineage** tab.

Step 3 — Call

1. Call from the official hotline (click-to-call where your telephony is integrated, otherwise dial manually).
2. Suggested opening (Vietnamese):

"Chào anh/chị, em là [tên] tư vấn viên của VETC. Em gọi lại theo yêu cầu của anh/chị trong cuộc gọi với trợ lý tự động của VETC về bảo hiểm TNDS cho xe [biển số đã che]. Em sẽ không hỏi mã OTP hay thông tin thẻ của anh/chị."

3. Do **not** read the full plate or personal details aloud until the customer confirms who they are.
4. If the customer is driving, offer to call back (set **Callback**).

Step 4 — Quote

1. In Customer 360, open the **Sell** tab. The **Quote & issue** card holds the quote builder.
2. **TNDS** is always included for the vehicle's category. Choose the **TNDS term** (1, 2 or 3 years) if the customer asks for multi-year cover.
3. Optional add-ons, if the customer is interested:
 - **Add driver & passenger accident cover** (ticked by default): choose the **Sum insured per seat** (10, 20 or 50 million VND). The number of seats comes from the vehicle record.
 - **Add physical damage (own vehicle)**: enter **Vehicle value (VND)**. Physical damage needs a vehicle inspection before the customer can pay (Step 5). Explain this.
4. Select **Get quote**.

What you will see: each product line with period, net premium, VAT and total, plus the order total and the included benefits. The quote shows "Payment happens only in the customer's VETC app — never on the phone." Quotes are valid for **24 hours**.

Handling price questions (script):

"Phí bảo hiểm TNDS do Nhà nước quy định, giống nhau ở mọi công ty bảo hiểm. Khi mua qua VETC cùng Bảo hiểm TASCO, anh/chị được gia hạn một chạm, nhận giấy chứng nhận điện tử ngay và cứu hộ giao thông 24/7."

Step 5 — Close: send the quote to the customer's VETC app

The customer always confirms and pays in their own VETC app, ideally while you are still on the call.

1. **Physical damage only:** before sending, the vehicle inspection must be recorded. When the assessor's inspection has passed, select **Record vehicle inspection (physical damage)** and enter the evidence (assessor name and photo reference). You see "Inspection recorded". Until this is done, the customer cannot pay for a quote that includes physical damage.
2. Select **Send to customer's VETC app to confirm & pay**.
3. **What you will see:** "Sent to customer: ..." with each channel and its status (for example app push, Zalo). The customer's VETC app now shows the quote on the Home tab under **Báo giá chờ bạn xác nhận** (quotes waiting for your confirmation).
4. Stay on the line while the customer taps **Xác nhận & thanh toán bằng ví VETC** and confirms the payment in their wallet.
5. Confirm with the customer that they see the e-certificate. The policy then appears in the **Policies** card of the **Sell** tab.

The customer automatically receives a confirmation message with a verification link, and the journey reminders stop.

Never ask the customer for their wallet PIN, OTP or card number. If a customer offers them, stop them politely. The console has no payment button: staff cannot take payment.

Payment in the app is protected against double charging: a repeated tap on the same quote does not charge twice.

Step 6 — Record the outcome

Back in the handoff detail, add a **Note** and select the outcome button:

Outcome	Use when	Effect
Won	Customer confirmed and paid in the app	Handoff closed. Journeys stop once the policy exists.
Callback	Customer asked to be called later	Stays in your queue as <i>callback</i> . Add the agreed time in Note .
Lost	Customer declined, bought elsewhere or is unreachable after attempts	Closed. Add the reason (for example "renewed at inspection centre, insurer X, expires 03/2027"), because it improves next year's data.

Always add a short **Note**. Notes are visible to your supervisor and are kept in the audit trail.

Allowed status changes: open → claimed / callback / won / lost; claimed → won / lost / callback / open (release); callback → claimed / won / lost. Won and lost are final. The console shows only the buttons allowed for the current status.

4. The voice bot console (practice and supervision)

Use **Voice bot** to rehearse what the assistant says, or to understand a customer's call.

1. Open **Voice bot** and pick a customer (or select  **Start voice bot** in Customer 360).
2. The bot speaks the introduction (Vietnamese, with an English gloss).
3. Type what the customer says, as speech-to-text would capture it, or use the **Quick replies**. Plates can be typed as "30A 123 45", digit by digit ("ba không A một hai ba bốn năm") or with Vietnamese tens ("ba mươi A, một hai ba bốn năm"). Motorbike plates such as "59X1-123.45" are also understood. Then type, for example, "đúng rồi" and "gửi link cho tôi".

What you will see: the transcript and the final outcome: `hot_handoff`, `link_sent`, `callback_later`, `already_renewed`, `opted_out`, `wrong_person`, `plate_mismatch`, `unverified` or `not_interested`. A `hot_handoff` creates a handoff in the inbox.

Calls started here are real platform actions. In production, use only customers you are working on. In the sandbox, practise freely.

5. Objection handling quick guide

Customer says	Do	Don't
"Is this a scam? Where did you get my number?"	Explain that VETC calls the toll account holder who registered this number. We never ask for OTP or payment by phone. Offer to send a notice to their VETC app so they can check.	Push for a sale
"Can you make it cheaper?"	The price is regulated and the same everywhere. Explain the service benefits.	Promise discounts, gifts or cashback
"I already renewed."	Thank them. Ask which insurer and the new expiry date. Record Lost with the details.	Argue
"Call me later."	Agree on a time and record Callback with a note	Call outside 08:00–20:00
"Don't call me again."	Apologise, confirm, and tell your supervisor to record the opt-out. The customer can also turn off calls in the app's consent centre.	Continue the call
"You've got the wrong person / I sold the car."	Apologise, end the call, record Lost with "wrong person"	Reveal any vehicle details

6. Tips

- Work **hot and urgent** first: negative days (lapsed) and ≤ 7 days.
- Read the **flags** before you call. A trust concern means you should open with reassurance.
- Use the **benefits shown for this customer**, which are chosen for them. Mention one, not five.
- Record outcomes immediately. Stale handoffs hurt the whole team's SLA.

7. Troubleshooting

Problem	Cause	Fix
I can't see a handoff my colleague mentioned	It's claimed by someone else or in another region	Ask your supervisor to reassign it
"Policy agent_own_handoffs denies update..."	The handoff is assigned to another agent	Supervisor reassigns
"Cannot move handoff from won to ..."	Won and lost are final	Ask your supervisor if it was a mistake
"Customer is on the do-not-contact list" when starting a voice session	Customer opted out	Do not contact
"Quote expired — please re-quote"	More than 24 h since the quote	Select Get quote again
"TND_S_MOTORBIKE is not sold on channel telesales"	Motorbike TND_S is app/Zalo only	Send the app link
"Sum insured exceeds the online limit — refer to underwriter"	Physical damage value above the online limit	Refer to underwriting
"Upstream service unavailable" when sending	A messaging channel is temporarily down	Try again later. The "Sent to customer" message lists each channel's status.
"Quote is ..." when sending	The quote was already paid, expired or is being paid	Check the Policies card. Re-quote if needed.
