6. Troubleshooting

Document	Version	Date	Owner	Status
Telesales Supervisor Manual	1.0	07 October 2026	iorta TechNXT — Business Analysis and UX	Issued for submission

Role: `telesales_supervisor` · **Demo user:** `supervisor` (region ALL) · **MFA:** not required by default

Your permissions: everything a telesales agent can do (`handoff:read` , `handoff:work` , `profile:read` , `profile:read_pii` , `quote:create` , `policy:read` , `voice:operate` , `leads:read`), plus **assign handoffs** (`handoff:assign`) and **read dashboards** (`dashboard:read`).

Your data scope: handoffs and customers in your region, or all regions if your region is ALL. Unlike agents, you see handoffs claimed by any agent in your scope.

Read the [Telesales Agent Manual](#) first. Everything there applies to you as well.

1. Your job with the platform

- Keep the **queue healthy**: no handoff waits more than 2 business hours for first contact (proposed target).
- **Balance workload** by assigning and reassigning handoffs.
- **Coach** agents on talking points, trust handling and recording outcomes.
- **Monitor** results on the dashboard and escalate issues (data, script, integrations).

2. Daily routine

Time	Task	Where
Start of shift	Check open and callback volumes. Assign the backlog.	Telesales inbox, Home
Every 1–2 hours	Look for handoffs older than 2 business hours (see the Created column). Reassign them.	Telesales inbox (status Open)
Midday	Spot-check 3–5 handoffs per agent: notes, outcomes, quotes sent to the customer's app	Handoff detail, Customer 360
End of shift	Make sure callbacks have notes and times. Release or reassign handoffs of absent agents.	Telesales inbox
Weekly	Review KPIs with the team. Feed script and data issues back.	Home dashboard, champion forum

3. Managing the queue

3.1 See the whole queue

1. Open **Telesales inbox**. As a supervisor you see all handoffs in your scope, including those claimed by agents.
2. Filter by **Status**: **Open** (not yet claimed), **Claimed**, **Callback**, **Won**, **Lost**, and select **Apply**.
3. Clear **Only mine** to see the team view.

3.2 Assign or reassign a handoff

Assignment needs the `handoff:assign` permission, which only supervisors hold. In v1 it is available through the platform API (`PATCH /api/handoffs/:id` with the agent's user ID in `assignTo` and a note). The handoff detail in the console does not yet have an **Assign to** field, so ask the support team or your champion to run the assignment for you until it is added.

What you will see: the handoff shows the new assignee and moves into that agent's queue. The change is recorded in the audit trail (`handoff.updated`).

Agents can work only handoffs that are unassigned or assigned to them, so reassigning is how you move work between agents.

3.3 Release a handoff back to the pool

A claimed handoff can be set back to **open** (with the assignee cleared) so that any agent in the region can claim it. In v1 this is also done through the API (`status: "open"`).

3.4 Correct an outcome

Won and lost are **final**. If an agent recorded the wrong final status, add a note on the handoff, and ask the campaign manager or data steward to correct the customer record where needed (for example an expiry date). Coach the agent.

4. Monitoring performance

4.1 Home dashboard

Open **Home**. Relevant sections:

Section	What to look at
Key indicators	Hot leads, policies sold, open data issues
Voice bot outcomes	How many calls ended <code>hot_handoff</code> , <code>link_sent</code> , <code>opted_out</code> , <code>plate_mismatch...</code>
Sales by journey	Orders by journey. Telesales success shows as app orders, because customers pay in the app.
Telesales inbox	Counts by status (Open, Claimed, Callback, Won, Lost) using the Status filter

Adoption figures (active users, handoff actions and the built-in targets: weekly active telesales $\geq 90\%$, handoff first contact within 2 business hours) come from the adoption report (`GET /api/dashboard/adoption`), shared in the weekly pilot review.

4.2 Team KPIs (proposed targets)

KPI	Target
Handoff first-contact time (median)	≤ 2 business hours (pilot), ≤ 1 (scale)
Open handoffs older than 1 business day	$\leq 10\%$
Outcomes recorded with a note	100 %
Weekly active agents	$\geq 90\%$

KPI	Target
Opt-out complaints after human calls	0

4.3 Coaching checklist (per sampled handoff)

- ☐ Claimed within target time?
- ☐ Talking points and trust/price flags addressed?
- ☐ One relevant benefit offered, no discount language?
- ☐ Quote sent to the customer's VETC app, with no payment taken by phone?
- ☐ Outcome and note recorded? For "lost", insurer and expiry captured?

5. Escalations

Issue	Escalate to	How
Wrong expiry dates or wrong-person calls in volume	Data steward	List the plates and customer IDs (no phone numbers in chat)
Voice bot script causes confusion	Campaign manager / Compliance	Example transcripts (session IDs). Changes go through the Rules studio.
Customer complaint about contact frequency	Compliance	Customer ID and dates. Consent can be withdrawn by the customer in the app.
Quote sending, wallet or issuance failures	Support (service desk)	Support code and time
Agent needs a different region or role	Platform administrator	Access request

6. Troubleshooting

Problem	Fix
"Missing permission handoff:assign"	Your account lacks the supervisor role. Contact the administrator.
An agent cannot see a handoff you assigned	Check the agent's region matches the handoff's region
"... was modified by someone else"	The agent updated it at the same time. Reload and retry.
"Cannot move handoff from callback to open"	Callback can go to claimed, won or lost only. Claim it first, then reassign.
