Staff User Manual	1.0	07 October 2026	iorta TechNXT — Business Analysis and UX	Issued for submission

This manual is for **all staff users** of the TASCO Growth Platform staff console. It covers signing in, finding your way around, the actions common to every role, getting help, and fixing common problems. For the details of your own job, read your **persona manual** (see the User Manuals index, 00-index.pdf).

About this version. This manual describes the **v1 UI**. Screen labels are shown in English with the Vietnamese label in brackets where useful. The console opens in Vietnamese by default. Small wording differences may appear while the UI is being finalised. The steps and permissions stay the same.

1. What the platform does

The platform helps TASCO Insurance and VETC sell and renew motor insurance, mainly compulsory third-party liability (TNDS), through the VETC ecosystem. It:

- builds a **trusted customer record** for each vehicle from VETC, TASCO and partner data, and shows how confident it is about each fact (for example, the policy expiry date);
- **scores and prioritises leads** and tells you the **next best action**, with reasons;
- runs **journeys**: reminders through the VETC app, Zalo and SMS, AI voice calls and telesales follow-up, within consent and anti-spam limits;
- lets customers **renew in the VETC app in a few taps** and receive an **e-certificate with a QR code**;
- lets partners sell through an **API**, and supports **claims notification**, **governed business rules** and a full **audit trail**.

Golden rule for everyone: TNDS premiums are set by regulation and are the same at every insurer. **Never offer or mention discounts, rebates or cashback.** We compete on service: roadside assistance, e-certificate, auto-renewal, inspection reminders and fast claims.

2. Before you start

You need	Notes
A user account	Created by the platform administrator after you complete training. Your account has one or more roles and a region (for example "Hà Nội", or ALL).
A supported browser	Latest Chrome, Edge, Firefox or Safari. Screen width of 1280 px or more is recommended.
An authenticator app (some roles)	Required for Administrator , Rule approver , Compliance officer , Data steward (and any role your organisation adds). Use Microsoft Authenticator, Google Authenticator or similar. You enrol it yourself at first sign-in.
The console address	Production: provided by TASCO IT. Training and UAT: provided by your trainer, with the access workbook.

3. Signing in

3.1 Sign in with password (all users)

1. Open the console address. The **Sign in (Đăng nhập hệ thống)** page appears: the TASCO Insurance brand panel on the left (on a phone, only the logo is shown) and the sign-in form on the right.
2. Enter your **Username (Tên đăng nhập)** and **Password (Mật khẩu)**. Use the credentials issued to you by the administrator. In training and UAT environments, they are in the access workbook for that environment.
3. Select **Sign in (Đăng nhập)**.

The sign-in page has no role shortcut buttons. Everyone signs in with their own username and password.

What you will see: if your role does not need MFA, you go straight to your landing page (section 4.2). If it does, the **Two-step verification (Xác thực hai bước)** step appears.

3.2 First sign-in: set up your authenticator app

MFA is required for the **Administrator**, **Rule approver**, **Compliance officer** and **Data steward** roles. You set it up yourself the first time you sign in. Nobody else, including the administrator, ever sees your authenticator key.

1. After the password step, the page shows a **QR code** and the message "Set up two-step sign-in".
2. Open your authenticator app (Microsoft Authenticator, Google Authenticator or similar) and scan the QR code. If you cannot scan it, open **Cannot scan? Enter the key manually** and type the key into the app.
3. The app shows a **TASCO Growth Platform** entry with a 6-digit code that changes every 30 seconds.
4. Type the current code into **6-digit authentication code (Mã xác thực 6 số)** and select **Verify (Xác minh)**.

What you will see: you are signed in, and from now on the platform asks for a code from this app at every sign-in.

3.3 Every sign-in: authentication code (MFA)

1. Open your authenticator app and find the **TASCO Growth Platform** entry.
2. Type the current 6-digit code into **6-digit authentication code** and select **Verify (Xác minh)**.
3. Codes change every 30 seconds. **Each code can be used only once.** If you have just used a code (for example, you signed in a moment ago), wait for the next code to appear.

You have **5 minutes** to complete this step. After that, start again from the password.

UAT only: the MFA step also shows **Sign in with demo code (UAT) (Đăng nhập bằng mã demo (UAT))**. It fills in and submits the current code for the demo user you signed in as. If the code was just used, the page shows "Code just used — please wait" with the number of seconds to wait. This button **does not exist in production**.

3.4 Session length and signing out

- Your session lasts **30 minutes**. When it expires you see "Session expired — please sign in again". Sign in again.
- To sign out, select **Sign out (Đăng xuất)** at the right of the top bar. Always sign out on shared computers.

3.5 Changing your password

1. Select the key icon (🔑) in the top bar. The **Change password** dialog opens. If your organisation signs you in with corporate single sign-on, change your password there instead.
2. Enter your **Current password** and the **New password (≥ 12 characters)**. The new password must follow the password policy and must differ from the current one.
3. Select **Save**.

What you will see: "Password changed — please sign in again". You are signed out on all devices and sign in again with the new password.

First sign-in with a temporary password: if the administrator created your account, the dialog **Please set your own password** opens straight after you sign in. You cannot close it until you have set your own password.

3.6 Account logout

After **5 failed attempts** (wrong password or wrong code, counted together), your account is locked for **15 minutes**. You see "Account temporarily locked". Wait, or ask the service desk to unlock it. Repeated sign-in attempts from the same computer are also rate limited ("Too many sign-in attempts — wait a minute").

4. Finding your way around

4.1 Screen layout

- **Left navigation** shows only the pages your role may use. If you expect a page that is not there, ask your manager whether your role is correct.
- **Top bar** (left to right):
 - **Menu:** shows or hides the left navigation on narrow screens.
 - **Your name, roles and region** (shown on wider screens).

- **? (Help / Trợ giúp)**: opens the **help drawer** for the page you are on.
- **Theme (Giao diện)**: switches between light and dark.
- **Language button**: shows **English** when the console is in Vietnamese and **Tiếng Việt** when it is in English. Your choice is remembered on this computer.
- **Change password**: opens the Change password dialog (section 3.5).
- **Sign out (Đăng xuất)**.
- **Skip to content**: press Tab once after the page loads to jump past the navigation (useful for keyboard users).

4.2 Where you land after sign-in

If your role...	You land on
can read dashboards (executive, campaign manager, supervisor, rule author, approver, compliance, data steward, partner manager, auditor, administrator)	Home : dashboard with KPIs relevant to the platform
is telesales agent	Telesales inbox
is claims handler	Claims
is support engineer	Operations

4.3 Pages and who uses them

Page (Vietnamese)	What it is for	Roles that see it
Home (Tổng quan)	Key indicators, journey mix, next best actions, data quality, messages, voice outcomes, sales by journey, channel economics	Users with dashboard access
Telesales inbox (Hộp việc telesales)	Customers handed over by the voice bot or journeys for a human call	Agents, supervisors, campaign managers (read)
Leads (Khách hàng tiềm năng)	Prioritised list of vehicles with score, tier, journey and next best action	Campaign, agents, supervisors, data stewards
Customer 360	Everything about one vehicle/customer; opens from Leads, the inbox or Data quality	Roles with customer access
Voice bot (Trợ lý gọi tự động)	Rehearse or supervise AI voice calls	Campaign, agents, supervisors
Claims (Bồi thường)	Accident reports (FNOL) from the app	Claims handlers
Journeys (Hành trình)	Run due reminders, ecosystem events, voice campaigns	Campaign managers
Partners (Đối tác)	Partner onboarding, API keys, commission statements	Partner managers
Rules studio (Quy tắc nghiệp vụ)	Versioned business rules with maker - checker	Authors, approvers, compliance, auditors; read - only for campaign and admin
Data quality (Chất lượng dữ liệu)	Data issues, corrections, data loads	Data stewards
Audit (Nhật ký kiểm toán)	Who did what and when; hash - chain status; governance figures (voice bot, rule sets, disclosure)	Compliance, approvers, auditors, admin
Users (Người dùng)	Accounts and roles	Administrators

Page (Vietnamese)	What it is for	Roles that see it
Operations (Vận hành)	Integration status, jobs, health	Administrators, support engineers

4.4 Keyboard use

Key	Action
Tab / Shift+Tab	Move between controls
Enter / Space	Activate a button or link
Esc	Close the help drawer or a dialog

5. Common actions

5.1 Lists: filter, sort and page

1. Use the filter bar above the list (for example, on Leads: **Tier**, **Journey**, **Next best action** and **Sort**).
2. Select **Apply (Áp dụng)**. The list updates.
3. To clear a filter, choose its "All ..." value and select **Apply** again.
4. Use **Previous / Next (Trước / Tiếp)** under the list to move between pages.

5.2 Opening a customer (Customer 360)

1. From **Leads**, select a row. From the **Telesales inbox**, select a row to open the handoff, then select **Quote & issue** →.
2. Customer 360 opens with the tabs **Overview**, **Data & lineage**, **Journey**, **Messages**, **Sell** and **Activity**. The **Sell** tab holds the quote builder (if your role can quote) and the customer's policies.

What you will see:

- **Golden record:** plate, vehicle category, province, owner type, policy expiry with **confidence** and **source**.
- **Score breakdown:** the lead score (0–100) and the points from each factor (renewal urgency, data confidence, engagement, reachability, relationship), each with a plain-language reason.
- **Guided next action:** one card with the recommended action and why.
- **Value to offer (no discounts):** benefits relevant to this customer. Items not yet legally approved are marked *pending legal review* and **must not be offered**.
- **Masked data:** if your role may not see personal data, name and phone appear masked (for example "N. V. An", "0912***678") with a *Masked* badge.

Every time you open a customer, the platform records it in the audit trail. Open customers only when your work needs it.

5.3 Using the guided "next best action"

The **Guided next action** card on Customer 360 (and the **Next best action** column on Leads) shows the single most useful step, based on the approved **nba** rules. Common actions:

Action label	Meaning	What to do
Do not contact	Customer opted out	Nothing. Do not call or message.
Route to fleet / B2B team	Company - owned vehicle	Pass to the B2B team.
Ask customer to confirm expiry in-app	Expiry date is unreliable	Send the confirmation request. Do not sell on an uncertain date.
Welcome pack: verify cover + e-certificate offer	New vehicle (new ETC tag)	Welcome; check existing cover first.
Schedule reminders	Renewal window not open yet (> 45 days)	Let the journey run.
Urgent: vehicle uninsured — service notice + call	Cover lapsed recently	Service notice, then call.
AI voice bot call → telesales handoff	Hot lead with call consent	Start or schedule a voice bot call.
One-tap renew link via app / Zalo	Reachable digitally	Send the renewal link.
SMS reminder with renew link	Phone only	Send an SMS link.
Find a contact channel	No usable contact data	Data stewards enrich the record.

5.4 Messages you will see

- **Toasts** (small messages in the corner) confirm actions, for example "Handoff claimed" or "Inspection recorded". They disappear after a few seconds.
- **Inline errors** appear under the field that needs fixing.
- **Support code (Mã hỗ trợ)**: error messages end with a short reference, for example "(ref 7f3c2a1b)". This is the start of the request ID. Give it to the service desk.

5.5 Language and theme

- Select the language button (**English / Tiếng Việt**) to switch language. Data values such as plates, IDs and rule names are not translated.
- Select  to switch light or dark. The default follows your computer's setting.

6. Getting help

1. **Help drawer**: select ? in the top bar. It explains the page and points to the manuals. Press **Esc** or **Close (Đóng)** to close it.
2. **Your champion**: each team has a trained champion for "how do I...?" questions.
3. **Persona manual**: see the User Manuals index (00-index.pdf).
4. **Service desk**: for access, lockouts, errors and anything that looks wrong. Include the **support code**, the page, the time and what you were doing. **Never send customer personal data in a ticket.** Use the plate or customer ID only.

7. Troubleshooting

Problem	Likely cause	What to do
"Invalid username or password"	Typo, Caps Lock, wrong account	Check and retry. After 5 failures the account locks for 15 minutes.
"Account temporarily locked"	5 failed attempts	Wait 15 minutes or contact the service desk.
"Invalid code — check the 6 digits and that your phone clock is correct"	Code expired, mistyped or phone clock wrong	Use the newest code. Set your phone time to automatic.
"This code has already been used — wait for the next code in your authenticator app"	Each code works only once	Wait for the next code (up to 30 seconds).
"MFA session expired — sign in again"	More than 5 minutes on the MFA step	Start again from the password.
A QR code appears although you set up MFA before	The administrator reset your MFA	Scan the new QR code (section 3.2). Remove the old entry from your app.
Lost or replaced phone with the authenticator	—	Contact the service desk. An administrator resets your MFA and you enrol again at the next sign-in.
"Session expired — please sign in again"	30-minute session ended	Sign in again.
A page is missing from the menu	Your role does not include it	Ask your manager to request a role change through the administrator.
"You do not have access to this page" / "Missing permission ..."	Role does not allow the action	As above. Do not share accounts.
Customer name or phone is masked	Your role is not allowed to see personal data	Expected behaviour.
"Policy ... denies read on this profile"	Customer is outside your region	Expected. Ask your supervisor to reassign.
"... was modified by someone else"	Someone else updated the same record	Reload and repeat your change.
"Too many requests"	Rate limit	Wait a minute and try again.
"Upstream service unavailable"	VETC wallet, TASCO core or a messaging provider is temporarily down	Retry later. Nothing was completed. Report it if it persists.
The screen looks wrong or blank	Browser cache, or an unsupported browser	Refresh (Ctrl+F5). Use a supported browser.

8. Frequently asked questions

Why is the TNDs price the same as everywhere else? Can I offer a better price? No. TNDs premiums are fixed by regulation (Decree 67/2023/ND-CP), and discounts are not allowed. Offer the service benefits shown on the customer page instead.

Why can't I see the customer's phone number? Personal data is shown only to roles that need it for their task (for example telesales). Everyone else sees it masked.

Why is a customer's expiry date marked "estimated"? Many records do not have a verified certificate. The platform infers the date from evidence (for example inspection cycles or partner records) and shows its confidence. Ask the customer to confirm it in the app before selling.

Why did a reminder not go out? The journey engine respects consent, contact hours (08:00–20:00), daily and weekly limits, and the copy guard. A touchpoint that is outside contact hours is deferred and stays scheduled. A touchpoint that no channel may send is skipped, and it shows the reason.

Who changes the business rules? Rule authors draft changes in the Rules studio and a **different person** approves them. Every change is recorded.

Is my activity recorded? Yes. Sign-ins, customer views and all changes are recorded in a tamper-evident audit trail, for security and regulatory reasons.

Can I use the training sandbox data in production or the other way round? No. The sandbox uses synthetic data and demo accounts. Never enter real customer data in the sandbox.

9. Responsible use

- Use only your own account. Never share passwords or authenticator codes.
- Open customer records only when your work requires it.
- Do not copy customer data into spreadsheets, chat apps or email.
- Never take payment, payment details or OTPs over the phone. Staff send quotes to the customer's VETC app, and the customer confirms and pays there.
- Report suspected security or privacy incidents to the service desk immediately.
