

Quality Engineering — TASCO Growth Platform

TASCO Insurance × VETC Growth Platform — Quality Engineering

iorta TechNXT

Version 1.0 · 07 October 2026

Document	Version	Date	Owner	Status
Quality Engineering index	1.0	07 October 2026	iorta TechNXT QA Lead	Issued for submission

Quality engineering documentation for the TASCO Insurance × VETC motor insurance growth platform (built by iorta TechNXT).

Document	Purpose	Primary audience
Test Strategy	Scope, test levels and types (unit, integration, API/contract, functional acceptance, SIT, UAT, NFT, security, resilience, DR, accessibility, localisation, compliance, data quality, migration), automation and CI gates, environments, test data, entry/exit criteria, defect severity, metrics, roles and current execution results. Appendix A is the known issues register (KI-01 – KI-33): 17 fixed, 16 open	QA, engineering, TASCO IT, SteerCo
Test Case Catalogue	164 test cases (TC-001 – TC-164) by module, with objective, preconditions, steps, expected result, type, priority and automation file	QA, developers, testers
Performance and Capacity Test Plan	Workload model for a 6 M-vehicle base, scenarios PERF-S1 – S13, SLO targets, tooling (<code>npm run test:perf</code>), environment sizing, pass/fail criteria, capacity model	Performance engineer, SRE, TASCO infrastructure
UAT Plan	UAT approach, 48 business scenarios by persona, reference data, entry/exit criteria, triage, sign-off sheet, schedule (11–22 January 2027)	TASCO business, VETC CX, Compliance
TASCO-Test-Cases-and-Results.xlsx	Record of execution: <i>Functional Test Cases</i> (124 user-story scenarios), <i>Test Cases</i> (TC-001 – TC-164 with actual results), <i>Automated Run</i> (one row per automated test) and <i>Summary</i>	QA, PMO, TASCO IT

Current results (07 October 2026)

238 automated tests: 235 passed, 0 failed, 3 todo (manual or roadmap scenarios). Coverage 99.5 % lines, 91.6 % branches, 97.2 % functions. ESLint 0 errors. Load smoke (1 process, 25 concurrent): ≈ 337 req/s, p95 ≈ 103 ms, 0 % errors. Details are in the Test Strategy §10 and the results workbook.

Quick reference — test commands

Command	What it runs
<code>npm run lint</code>	ESLint over the repository
<code>npm test</code>	Unit, integration, API, security and functional suites (<code>test/unit</code> , <code>test/integration</code> , <code>test/api</code> , <code>test/security</code> , <code>test/functional</code>)
<code>npm run test:unit / npm run test:api / npm run test:functional</code>	One layer only
<code>npm run test:coverage</code>	Same suites with the coverage gate: lines ≥ 80 %, functions ≥ 80 %, branches ≥ 70 %
<code>npm run test:security</code>	Abuse-case suite (<code>test/security</code>) and the functional suite
<code>npm run test:pg</code>	PostgreSQL adapter, migrations, encryption at rest, SQL injection resistance, audit immutability, outbox claims (<code>test/pg/postgres.test.js</code> ; needs <code>TEST_DATABASE_URL</code> , default <code>postgres://postgres:postgres@localhost:5432/tasco_test</code>)

Command	What it runs
<code>npm run test:perf</code>	HTTP load generator (<code>test/perf/load.js</code>) reporting p50/p95/p99 and RPS; fails above the p95 budget (300 ms) or 1 % errors
<code>npm run audit</code>	<code>npm audit --omit=dev --audit-level=high</code>

ID conventions used across quality and operations documents

Prefix	Meaning	Defined in
TC-nnn	Test case	Test Case Catalogue
US-nnn	User-story scenario (functional suite)	User Stories and Acceptance Criteria; results workbook
KI-nn	Known issue from code review	Test Strategy, Appendix A
PERF-Sn	Performance scenario	Performance and Capacity Test Plan
UAT-XX-nn	UAT business scenario	UAT Plan
RB-nn	Runbook incident procedure	Runbook and Support Guide
SOP-nn	Standard operating procedure	Runbook and Support Guide
ALR-nn	Alert rule	Monitoring and Alerting
PRC-xxx-nn	Production readiness check	Production Readiness Checklist
DR-Tn	DR test	DR and BCP
